

**PRODUCT CHANGE NOTIFICATION**

Ai PCN No: 117

Date Issued:	05/08/2014
Notice Type:	LED Discontinuation
Product Type:	660nm 5mm LED's

**Change Notification Summary**

At Advanced illumination, we are continually re-evaluating our product line as well as the continued availability of components within our products. The LED manufacturing industry is discontinuing production of 660nm LED technology in favor of 625nm due to its measurably brighter output and consistent performance.

As a result, we will be phasing out the use of 660nm 5mm LED's over the next year and will no longer be producing lights with 660nm 5mm LED's as of May 2015. Instead, we will be offering the same products, but with the current industry-supported 625nm wavelength.

We are fully committed to easing any transitions and finding suitable solutions for customers. Should you have any questions or concerns, please contact your sales representative or our Customer Service department.
