

PRODUCT CHANGE NOTIFICATION

Ai PCN No: 118 Rev A

Date Issued:	05/22/2014
Notice Type:	ISU Discontinuation
Product Type:	Strobe Controllers

Change Notification Summary

As technology and performance improve within the industry, it is important that we support industry standards and make ongoing improvements to our product line. **Therefore, we will be discontinuing the ISU (Inline Strobe Unit) as of September 1, 2014 and replacing it with the ICS 3 Inline Control System.**

The ICS 3 provides a more robust and versatile strobe-boost than the ISU, as well as a continuous operation mode with dimming. These improvements will offer users flexibility in adapting their application and decrease restrictions from driver limitations. The ICS 3 will be the same price as the ISU and is available immediately.

Benefits of the ICS 3 include:

- Continuous and strobe-boost operation - choose what works best for the application
- Variable pulsewidth - strobe 10µsec or longer
- Automatically adjusts output drive level, providing the maximum brightness potential for any pulsewidth
- Industry-standard 0-10V analog dimming interface
- Robust housing and available in a wash down housing

We are fully committed to easing any transitions and finding suitable solutions for our customers. Should you have any questions or concerns, please contact your Sales Representative or our Customer Service department.
